# ELECTRIC FUEL PUMP INSTALLATION INSTRUCTIONS

- 1) Relieve fuel system pressure removing the cap from the fuel tank.
- 2) Remove the fuel pump fuse from the fuse block.
- 3) Start and run engine until the fuel in the fuel lines is consumed.
- 4) Engage the starter one more time for few seconds to assure relief of any remaining pressure in the fuel lines.
- 5) Place the ignition switch in "OFF" and replace fuel pump fuse.
- 6) Disconnect the negative cable from the battery.
- 7) Drain fuel tank
- 8) Disconnect fuel hoses and electrical connectors from fuel pump assembly.
- 9) Remove the fuel pump assembly lock ring.
- 10) Remove fuel pump assembly from fuel tank. Avoid bending the pump mounting bracket and/or float arm.
- 11) Have the tank professionally cleaned and flushed (dirt can destroy the pump).
- 12) Remove strainer from pump noting orientation of strainer.
- 13) Remove electrical connector from pump noting polarity.
- 14) Remove hose and hose clamps connected on fuel pump (if applicable).
- 15) Install rubber insulator on fuel pump and seat rubber insulator and pump securely in mounting bracket.
- 16) Reconnect electrical connector on the new pump if it has the same connector. If not, cut the wires (no to short). Strip off wire insulation. Noting polarity, crimp or solder on new wire ends and new wires provided in kit (Do not use electrical tape, fuel will dissolve it)
- 17) Lubricate with petroleum jelly the new fuel hose and pump outlet. Install the new hoses and clamps. Tight the clamps (if applicable).
- 18) Install the new strainer in the same position as noted in step 12.
- 19) Inspect the pump to see if everything is properly connected and pump is correctly seated on the insulator and in the mounting bracket.
- 20) Install fuel pump assembly in tank.
- 21) Install lock ring and tighten.
- 22) Reconnect hoses and electrical connectors.
- 23) Reconnect fuse and battery cable.
- 24) Fill the tank.
- 25) Start card and inspect fuel line and gaskets for fuel leaks.
